6 Final Warning	37

1. Purpose of This Document

This document separates the project discovery questions into two groups:

- **Questions for the Brand Owner:** business, product, design, customer experience, delivery, payments, and operations.
- **Questions for the Developer / Technical Architect:** architecture, database, authentication, security, deployment, testing, performance, and failure handling.

The goal is to fully understand the project before writing a Codex prompt or starting development.

2. Questions for the Brand Owner

These questions define the business, brand, products, customers, shopping experience, delivery, payment, and launch requirements.

2.1. Brand Identity

1. What is the clothing store name?
2. Is this an existing brand or a new brand?
3. Do you already have a logo?
4. Do you already have brand colors?
5. Do you already have brand fonts?
6. What feeling should the brand give: luxury, streetwear, minimal, sporty, elegant, youthful, premium, local Armenian, or international?
7. Who is your target customer?
8. What age group are you targeting?
9. Are you targeting men, women, kids, or everyone?
10. What price level is the brand: affordable, mid-range, premium, or luxury?
11. What makes your brand different from competitors?
12. Do you have a slogan?
13. Do you want a brand story section?
14. Do you want an About Us page?
15. Do you have professional brand photos?
16. Do you have product photos already?
17. Do you want the website to feel more like a boutique, marketplace, or luxury fashion brand?
18. Name three clothing websites you like.
19. Name three clothing websites you dislike.
20. Should the website feel clean and minimal or rich and animated?

2.2. Languages, Countries, and Currency

1. What countries will you sell to?
2. Will you sell only in Armenia?
3. Will you sell only in Yerevan?
4. Will you sell internationally later?
5. What languages should the website support?
6. What should be the default language?
7. Should Armenian be supported?
8. Should English be supported?
9. Should Russian be supported?
10. Do you want customers to switch languages manually?
11. What currency should be used?
12. Should AMD be supported?
13. Should USD be supported?
14. Should EUR be supported?
15. Do you want currency switching?
16. Should prices include tax?
17. Should prices show discounts clearly?
18. Should old price and new price both be visible?
19. Do you want legal or business information shown in the footer?
20. Do you need invoices or receipts?

2.3. Product Types

1. What products will you sell first?
2. Will you sell T-shirts?
3. Will you sell hoodies?
4. Will you sell pants?
5. Will you sell jeans?

6. Will you sell jackets?
7. Will you sell dresses?
8. Will you sell shoes?
9. Will you sell bags?
10. Will you sell accessories?
11. Will you sell jewelry?
12. Will you sell kids clothing?
13. Will you sell men's clothing?
14. Will you sell women's clothing?
15. Will you sell unisex clothing?
16. How many products will you launch with?
17. How often will you add new products?
18. Will products have sizes?
19. What sizes will you use?
20. Will you use XS?
21. Will you use S?
22. Will you use M?
23. Will you use L?
24. Will you use XL?
25. Will you use XXL?
26. Will you use numeric sizes?
27. Will you use EU sizes?
28. Will you use US sizes?
29. Will you use shoe sizes?
30. Will products have colors?
31. Will each product color need different images?
32. Will each size/color combination have separate stock?
33. Will products have materials listed?

34. Will products have care instructions?
35. Will products have model size information?
36. Should the product page show examples like “Model is 180cm wearing M”?
37. Will products have SKU codes?
38. Will products have barcodes?
39. Will products have weight?
40. Will products have dimensions?
41. Will products have “new arrival” labels?
42. Will products have “best seller” labels?
43. Will products have “sold out” labels?
44. Will products have “limited edition” labels?
45. Will products have “sale” labels?
46. Will products have seasonal labels?

2.4. Product Categories and Collections

1. What categories do you need?
2. Do you need a Men category?
3. Do you need a Women category?
4. Do you need a Kids category?
5. Do you need a New Arrivals category?
6. Do you need a Sale category?
7. Do you need a T-shirts category?
8. Do you need a Hoodies category?
9. Do you need a Pants category?
10. Do you need a Jackets category?
11. Do you need an Accessories category?
12. Do you need a Shoes category?
13. Do you need subcategories?

14. Do you need category structures like Men → Hoodies → Oversized?
15. Do you need collections?
16. Do you need a Summer Collection?
17. Do you need a Winter Drop?
18. Do you need a Black Collection?
19. Do you need Premium Basics?
20. Do you want products to belong to multiple categories?
21. Do you want products to belong to multiple collections?
22. Do you want featured collections on the homepage?
23. Do you want category banners?
24. Do you want collection descriptions?
25. Do you want category SEO text?

2.5. Product Page Experience

1. What information should appear on each product page?
2. Should product name appear?
3. Should price appear?
4. Should sale price appear?
5. Should size selector appear?
6. Should color selector appear?
7. Should quantity selector appear?
8. Should stock availability appear?
9. Should product description appear?
10. Should material information appear?
11. Should care instructions appear?
12. Should size guide appear?
13. Should delivery information appear?
14. Should return information appear?

15. Should related products appear?
16. Should recently viewed products appear?
17. Should reviews appear?
18. Should ratings appear?
19. Should customer photos appear?
20. Should product video appear?
21. Should image zoom be available?
22. Should image carousel be available?
23. Should mobile swipe gallery be available?
24. Should Add to Cart button be sticky on mobile?
25. Should unavailable sizes be crossed out?
26. Should sold-out products show “Notify me”?
27. Should users be able to ask a question about a product?
28. Should product page show estimated delivery date?
29. Should product page show “Only X left”?

2.6. Product Images and Visual Content

1. Do you already have product images?
2. How many images per product?
3. Do you need model-wearing photos?
4. Do you need flat-lay photos?
5. Do you need close-up fabric photos?
6. Do you need lifestyle images?
7. Do you want video support?
8. Should each color variant have its own photos?
9. Should images be square?
10. Should images be portrait?
11. Should images have white background?

12. Should images have lifestyle background?
13. Do you want hover image change on desktop?
14. Do you want image zoom?
15. Do you want full-screen image preview?
16. Do you want Instagram-style product visuals?
17. Do you want lookbook pages?

2.7. Homepage

1. What sections should homepage include?
2. Should homepage include a hero section?
3. Should homepage include new arrivals?
4. Should homepage include best sellers?
5. Should homepage include collections?
6. Should homepage include categories?
7. Should homepage include brand story?
8. Should homepage include testimonials?
9. Should homepage include sale section?
10. Should homepage include Instagram feed?
11. Should homepage include newsletter signup?
12. Should homepage include delivery and return benefits?
13. Should homepage include featured product?
14. Should homepage include lookbook section?
15. Should homepage include video background?
16. Should homepage include announcement bar?
17. Should hero image be different on desktop and mobile?
18. What should the main hero button say?
19. Should the button say "Shop Now"?
20. Should the button say "View Collection"?

21. Should the button say “New Arrivals”?
22. Should homepage be editable by admin?
23. Should homepage have animations?
24. Should animations be subtle or strong?
25. Should homepage prioritize beauty or speed?

2.8. Catalog Page

1. Should customers filter by size?
2. Should customers filter by color?
3. Should customers filter by category?
4. Should customers filter by collection?
5. Should customers filter by price?
6. Should customers filter by availability?
7. Should customers filter by gender?
8. Should customers filter by material?
9. Should customers sort by newest?
10. Should customers sort by price low to high?
11. Should customers sort by price high to low?
12. Should customers sort by best selling?
13. Should customers sort by popularity?
14. Should sold-out products appear?
15. Should sold-out products be hidden?
16. Should product cards show color options?
17. Should product cards show available sizes?
18. Should product cards show quick add?
19. Should product cards show discount percentage?
20. Should product cards show wishlist button?

2.9. Search

1. Should customers be able to search products?
2. Should search work by product name?
3. Should search work by category?
4. Should search work by color?
5. Should search work by SKU?
6. Should search show suggestions while typing?
7. Should search show recent searches?
8. Should search show popular searches?
9. Should search tolerate spelling mistakes?
10. Should search open full-screen on mobile?
11. Should search results include products only?
12. Should search results include categories and collections too?

2.10. Cart

1. Should cart be a slide-out drawer?
2. Should cart be a separate page?
3. Should cart show product image?
4. Should cart show selected size?
5. Should cart show selected color?
6. Should cart show quantity?
7. Should users change quantity in cart?
8. Should users remove items?
9. Should cart show subtotal?
10. Should cart show delivery fee?
11. Should cart show total?
12. Should cart show free delivery message?
13. Should the store support messages like “Free delivery above 30,000 AMD”?

14. Should cart have discount code input?
15. Should cart have order notes?
16. Should cart have gift wrapping?
17. Should cart save if user leaves the website?
18. Should cart work without account?
19. Should cart warn when stock is low?
20. Should cart show “item no longer available” if stock changes?

2.11. Checkout

1. Should users checkout as guests?
2. Should users create an account?
3. Should account be optional?
4. Should checkout be one-page?
5. Should checkout be step-by-step?
6. What customer information is required?
7. Should full name be required?
8. Should phone number be required?
9. Should email be required?
10. Should city be required?
11. Should address be required?
12. Should apartment or building be required?
13. Should postal code be required?
14. Should delivery notes be supported?
15. Should preferred delivery date be supported?
16. Should preferred delivery time be supported?
17. Should checkout support Armenian phone numbers?
18. Should checkout support international phone numbers?
19. Should users confirm order before submitting?

20. Should customers receive order confirmation email?
21. Should customers receive SMS?
22. Should customers receive WhatsApp message?
23. Should admin receive new order notification?
24. Should checkout be extremely simple?
25. Should checkout collect details step by step?
26. Should checkout show order summary at all times?

2.12. Payments

1. What payment methods will V1 support?
2. Will V1 support cash on delivery?
3. Will V1 support bank transfer?
4. Will V1 support Idram?
5. Will V1 support Telcell?
6. Will V1 support Ameriabank?
7. Will V1 support ArCa?
8. Will V1 support Stripe?
9. Will V1 support PayPal?
10. Do you already have a payment provider account?
11. Do you want online payments in V1?
12. Do you want online payments later?
13. Should unpaid orders expire?
14. Should customers receive payment instructions?
15. Should admin manually confirm bank transfers?
16. Should refunds be supported?
17. Should partial refunds be supported?
18. Should customers receive receipts?
19. Should invoices be generated?

20. Should payment status be visible to customer?

Recommendation: For a first version, cash on delivery or manual confirmation is usually safer than rushing payment gateway integration.

2.13. Delivery and Pickup

1. Do you offer delivery?
2. Do you offer pickup?
3. Do you deliver only in Yerevan?
4. Do you deliver across Armenia?
5. Do you deliver internationally?
6. What delivery company will you use?
7. Do you have your own courier?
8. Is delivery fee fixed?
9. Is delivery fee based on city?
10. Is delivery fee based on order amount?
11. Is delivery free above a certain amount?
12. Do different cities have different delivery prices?
13. Do customers choose delivery date?
14. Do customers choose delivery time?
15. Do you offer same-day delivery?
16. Do you offer next-day delivery?
17. Do you offer store pickup?
18. Where is pickup location?
19. Should pickup be free?
20. Should customers get delivery tracking?
21. Should admin manually update delivery status?
22. Should customer receive delivery status updates?
23. What happens if customer is unavailable during delivery?

2.14. Orders

1. What order statuses do you need?
2. Do you need Pending status?
3. Do you need Confirmed status?
4. Do you need Paid status?
5. Do you need Preparing status?
6. Do you need Ready for Pickup status?
7. Do you need Out for Delivery status?
8. Do you need Delivered status?
9. Do you need Cancelled status?
10. Do you need Returned status?
11. Do you need Exchanged status?
12. Do you need Refunded status?
13. Should customers see order status?
14. Should customers track orders without account?
15. Should customers track orders by phone, email, or order number?
16. Should admin add internal order notes?
17. Should customer order notes be visible?
18. Should admin edit orders?
19. Should admin cancel orders?
20. Should admin create manual orders?
21. Should customers be able to cancel orders?
22. If customers can cancel orders, until which status?
23. Should customers request returns?
24. Should customers request exchanges?

2.15. Customer Accounts

1. Do customers need accounts?
2. Should accounts be optional?
3. Should guest checkout be allowed?
4. What can users see in account?
5. Should users see order history?
6. Should users see saved addresses?
7. Should users see wishlist?
8. Should users see recently viewed products?
9. Should users see return requests?
10. Should users edit profile info?
11. Should users log in with email and password?
12. Should users log in with Google?
13. Should users log in with Apple?
14. Should users log in with phone OTP?
15. Should email verification be required?
16. Should users reset password?
17. Should users delete account?

2.16. Wishlist and Reviews

1. Do you need wishlist?
2. Does wishlist require account?
3. Do you need product reviews?
4. Can anyone review?
5. Can only customers who purchased review?
6. Should reviews require admin approval?
7. Should reviews include stars?
8. Should reviews include text?

9. Should reviews include photos?
10. Should admin reply to reviews?
11. Should bad reviews be hidden until approved?
12. Should review system be V1 or later?

2.17. Discounts and Promotions

1. Do you need discount codes?
2. Do you need percentage discount?
3. Do you need fixed amount discount?
4. Do you need free delivery code?
5. Do you need first-order discount?
6. Do you need influencer promo codes?
7. Do you need minimum order amount for discounts?
8. Do you need discount expiration date?
9. Do you need discount usage limit?
10. Do you need one use per customer?
11. Do you need product-specific discounts?
12. Do you need category-specific discounts?
13. Do you need automatic sale prices?
14. Do you need flash sales?
15. Do you need bundle discounts?
16. Do you need Buy 2 Get 1 offers?
17. Should discount system be V1 or later?

2.18. Admin Panel Business Features

1. Do you need an admin dashboard?
2. Who will use the admin dashboard?
3. Will one person or multiple staff use it?
4. What should admin manage?

5. Should admin manage products?
6. Should admin manage product images?
7. Should admin manage categories?
8. Should admin manage collections?
9. Should admin manage stock?
10. Should admin manage orders?
11. Should admin manage customers?
12. Should admin manage discounts?
13. Should admin manage homepage content?
14. Should admin manage delivery fees?
15. Should admin manage FAQ?
16. Should admin manage policies?
17. Should admin manage size guide?
18. Should admin see sales analytics?
19. Should admin see best sellers?
20. Should admin see low-stock products?
21. Should admin export orders?
22. Should admin export products?
23. Should admin receive low-stock alerts?
24. Should admin receive new order alerts?

2.19. Inventory

1. Do you want stock tracking?
2. Should stock be tracked per product?
3. Should stock be tracked per size/color?
4. Should stock decrease after order is placed?
5. Should stock decrease only after admin confirms order?
6. Should cancelled orders restore stock?

7. Should returned orders restore stock?
8. Should admin see inventory history?
9. What is considered low stock?
10. Is low stock under 3?
11. Is low stock under 5?
12. Should low stock be a custom number?
13. Should customers see exact stock count?
14. Should customers only see Available or Sold Out?
15. Do you allow preorder?
16. Do you allow backorder?
17. Do you want “Notify me when available”?

2.20. Customer Support

1. Should website have WhatsApp button?
2. Should website have Instagram button?
3. Should website have Messenger button?
4. Should website have phone call button?
5. Should website have email contact button?
6. Should website have contact form?
7. Should website have live chat?
8. Should website have product question form?
9. Should website have return request form?
10. Should website have size help form?
11. Should website have FAQ page?
12. Should support messages go to email?
13. Should support messages appear in admin dashboard?

2.21. Policies and Legal

1. What is your return policy?
2. What is your exchange policy?
3. What is your delivery policy?
4. What is your privacy policy?
5. What are your terms of service?
6. Do users need to accept terms during checkout?
7. Do users need to accept marketing emails separately?
8. Do you need cookie consent?
9. What official company name should appear?
10. What official phone number should appear?
11. What official email should appear?
12. What official address should appear?
13. Are you registered as a business?
14. Do you need invoice support?

2.22. Marketing and Analytics

1. Do you want newsletter signup?
2. Do you want promo popup?
3. Do you want abandoned cart emails later?
4. Do you want Google Analytics?
5. Do you want Meta Pixel?
6. Do you want TikTok Pixel?
7. Do you want Google Tag Manager?
8. Do you want Instagram feed?
9. Do you want product sharing buttons?
10. Do you want social media links?
11. Do you want blog or news pages?

12. Do you want SEO for Armenian?
13. Do you want SEO for Russian?
14. Do you want SEO for English?
15. Do you want product pages to appear on Google?

2.23. Launch Planning

1. What is your launch deadline?
2. How many products will be available at launch?
3. How many orders per day do you expect?
4. Who will add products?
5. Who will manage orders?
6. Who will answer customers?
7. Who will update stock?
8. Who will handle delivery?
9. Is this V1 supposed to be production-ready?
10. Or is this only a prototype?
11. What features are absolutely required for launch?
12. What features can wait until V2?
13. What is your budget?
14. Do you already have a domain?
15. Do you already have hosting?
16. Do you already have business email?
17. Do you already have product photos?
18. Do you already have product descriptions?
19. Do you already have policies written?

3. Questions for the Developer / Technical Architect

These questions define the architecture, database, authentication, security, performance, deployment, and failure handling.

3.1. Recommended Technical Stack

1. Should the project use Next.js?
2. Should the project use React?
3. Should the project use TypeScript?
4. Should the project use Tailwind CSS?
5. Should the project use shadcn/ui?
6. Should the project use Framer Motion?
7. Should the project use Supabase?
8. Should the project use PostgreSQL?
9. Should the project use Supabase Auth?
10. Should the project use Supabase Storage?
11. Should the project use Vercel?
12. Should the project use Resend for emails?
13. Should the project use Zustand for cart state?
14. Should the project use React Hook Form?
15. Should the project use Zod validation?
16. Should the project use TanStack Query?
17. Should the project use Prisma?
18. Should the project avoid Prisma and use Supabase client directly?
19. Should the project use server actions?
20. Should the project use API routes?
21. Should the project be monolithic?
22. Should frontend and admin be in the same app?
23. Should admin be a separate app?

24. Should database migrations be included?

25. Should seed data be included?

Recommended stack: Next.js, TypeScript, Tailwind CSS, shadcn/ui, Supabase PostgreSQL/Auth/Storage, Vercel, Resend, Zustand, Zod, and React Hook Form.

3.2. Project Architecture

1. What folder structure should be used?
2. Should there be an App Router structure?
3. Should public website routes be separated from admin routes?
4. Should routes include `/admin`, `/account`, `/products`, and `/checkout`?
5. Should components be separated into UI, layout, product, cart, checkout, and admin folders?
6. Should business logic be separated into services?
7. Should database types be generated?
8. Should shared types be stored in `/types`?
9. Should validation schemas be stored in `/lib/validations`?
10. Should Supabase client helpers be separated for browser and server?
11. Should all server-only code be protected?
12. Should environment variables be validated?
13. Should there be a `.env.example` file?
14. Should there be README setup instructions?
15. Should there be deployment instructions?
16. Should there be a production checklist?

3.3. Database Schema

1. What database tables are required?
2. Is a `products` table required?
3. Is a `product_variants` table required?
4. Is a `product_images` table required?

5. Is a `categories` table required?
6. Is a `collections` table required?
7. Is a `product_categories` table required?
8. Is a `product_collections` table required?
9. Is a `customers` table required?
10. Is an `addresses` table required?
11. Is an `orders` table required?
12. Is an `order_items` table required?
13. Is a `payments` table required?
14. Is a `discount_codes` table required?
15. Is a `wishlist_items` table required?
16. Is a `reviews` table required?
17. Is an `inventory_logs` table required?
18. Is an `admin_users` table required?
19. Is a `delivery_zones` table required?
20. Is a `return_requests` table required?
21. Is a `site_settings` table required?
22. Is a `homepage_sections` table required?
23. Should all tables use UUID primary keys?
24. Should all tables have `created_at`?
25. Should all tables have `updated_at`?
26. Should products use unique slugs?
27. Should categories use unique slugs?
28. Should money be stored as integers?
29. Should product deletion be soft-delete?
30. Should old orders preserve product name, price, size, and color at purchase time?
31. Should order items be immutable after purchase?
32. Should stock be stored on variants?

33. Should inventory changes be logged?
34. Should admin actions be logged?

3.4. Authentication and Authorization

1. Should Supabase Auth be used?
2. Should admin login use Supabase Auth?
3. Should customer login use Supabase Auth?
4. Should guest checkout be allowed?
5. Should admin role be stored in an `admin_users` table?
6. Should role-based access be implemented?
7. Should roles include owner, manager, inventory manager, and order manager?
8. Should middleware protect admin routes?
9. Should server-side checks protect admin actions?
10. Should customers only access their own orders?
11. Should public users only access active products?
12. Should inactive or deleted products be hidden?
13. Should anonymous users be able to create orders?
14. Should anonymous order creation be rate-limited?
15. Should email verification be required?
16. Should password reset be enabled?
17. Should OAuth login be supported?
18. Should admin 2FA be planned for later?

3.5. Row Level Security

1. Should Supabase RLS be enabled on all tables?
2. What can public users read?
3. Can public users read active products?
4. Can public users read active categories?
5. Can public users read active collections?

6. Should public users be blocked from reading orders?
7. Can customers read their own orders?
8. Can admins read all orders?
9. Can admins manage products?
10. Can admins manage categories?
11. Can admins manage inventory?
12. Can anonymous users insert checkout orders?
13. Should anonymous order insertion go through a server route instead of direct client insert?
14. Should storage buckets have public read access for product images?
15. Should only admins upload product images?
16. Should file type and size validation be enforced?

3.6. Checkout Logic

1. Should checkout be handled by server action or API route?
2. Should the server validate product IDs?
3. Should the server validate variant IDs?
4. Should the server validate stock?
5. Should the server validate prices?
6. Should the server validate discounts?
7. Should the server calculate subtotal?
8. Should the server calculate delivery fee?
9. Should the server calculate final total?
10. Should frontend-submitted prices be ignored?
11. Should order creation be transactional?
12. How should duplicate submissions be prevented?
13. Should idempotency keys be used?
14. Should checkout reserve stock?

15. Should stock decrease immediately after order?
16. Should stock decrease only after confirmation?
17. What happens if stock is insufficient?
18. What happens if price changed?
19. What happens if discount expired?
20. What happens if delivery zone is invalid?
21. What happens if email notification fails after order creation?
22. Should order still be created if email fails?
23. Should failed notifications be logged?
24. Should customer cart clear only after successful order?
25. Should order confirmation page use order ID or token?
26. Should guest order lookup use secure token?
27. Should checkout have anti-spam protection?

3.7. Payment Architecture

1. Should V1 support cash or manual payment only?
2. Should online payment be abstracted for V2?
3. Should payment provider integration be modular?
4. Should a `payments` table exist even in V1?
5. Should payment status be separate from order status?
6. Should payment statuses include pending, paid, failed, and refunded?
7. Should webhooks be supported later?
8. Should webhook signature validation be implemented?
9. Should failed payment restore stock?
10. Should unpaid orders expire?
11. Should payment provider secrets stay server-side only?
12. Should receipts be generated?
13. Should refunds be logged?
14. Should payment attempts be logged?

3.8. Inventory Handling

1. Should inventory be stored per variant?
2. Should stock updates be atomic?
3. How should the system prevent two customers from buying the last item?
4. Should database functions handle stock decrement?
5. Should admin stock changes create inventory logs?
6. Should cancelled orders restore stock?
7. Should returned orders restore stock?
8. Should stock reservations expire?
9. Should low-stock threshold be per variant?
10. Should low-stock notifications be implemented?
11. Should sold-out variants be blocked from checkout?
12. Should preorder variants be allowed?

3.9. Admin Dashboard Architecture

1. Should admin dashboard be built inside Next.js?
2. Should admin routes be server-rendered?
3. Should admin use protected layouts?
4. Should admin product forms use React Hook Form?
5. Should image uploads go to Supabase Storage?
6. Should product image order be sortable?
7. Should product variants be editable inline?
8. Should admin support draft products?
9. Should admin support product publishing?
10. Should admin support bulk product import?
11. Should admin support CSV export?
12. Should admin dashboard include charts?
13. Should admin order status updates trigger notifications?

14. Should admin actions be audited?
15. Should admin errors be logged?

3.10. Image Storage and Optimization

1. Should product images be stored in Supabase Storage?
2. Should Cloudinary be used instead?
3. Should images be uploaded through admin only?
4. Should image file size be limited?
5. Should accepted types be JPG, PNG, and WebP?
6. Should images be automatically resized?
7. Should thumbnails be generated?
8. Should Next.js Image optimization be used?
9. Should product images use blur placeholders?
10. Should lazy loading be enabled?
11. Should mobile images use smaller sizes?
12. Should broken image fallback be implemented?

3.11. Email and Notifications

1. Should Resend be used?
2. Should customer order confirmation email be sent?
3. Should admin new order email be sent?
4. Should status update emails be sent?
5. Should low-stock emails be sent?
6. Should failed notification logs be stored?
7. Should email templates use React Email?
8. Should emails support multiple languages?
9. Should Telegram notification be used?
10. Should WhatsApp or SMS be V2?
11. Should notification provider be abstracted?

3.12. SEO and Metadata

1. Should Next.js metadata API be used?
2. Should product pages have dynamic meta titles?
3. Should product pages have dynamic descriptions?
4. Should product pages have OpenGraph images?
5. Should category pages have metadata?
6. Should collection pages have metadata?
7. Should sitemap.xml be generated?
8. Should robots.txt be generated?
9. Should product structured data be added?
10. Should canonical URLs be added?
11. Should multilingual hreflang be added?
12. Should inactive products be removed from sitemap?
13. Should sold-out products remain indexed?

3.13. Performance

1. Should product listing use pagination?
2. Should product listing use infinite scroll?
3. Should filtering happen server-side?
4. Should search happen server-side?
5. Should product pages be statically generated?
6. Should ISR or revalidation be used?
7. Should homepage be cached?
8. Should admin pages avoid caching?
9. Should heavy animations be disabled on reduced motion?
10. Should bundle size be monitored?
11. Should images be optimized?
12. Should loading skeletons be implemented?

13. Should error boundaries be implemented?
14. Should empty states be implemented?
15. Should retry UI be implemented for failed requests?

3.14. Internationalization

1. Should the site use next-intl?
2. Which locales should be supported?
3. Should product data be translatable?
4. Should category names be translatable?
5. Should collection names be translatable?
6. Should product descriptions be translatable?
7. Should email templates be multilingual?
8. Should URLs include locale?
9. Should URLs look like `/hy/products/...`?
10. Should default locale redirect automatically?
11. Should admin manage translations?
12. Should missing translations fall back to English?

3.15. Testing

1. Should unit tests be included?
2. Should checkout logic have tests?
3. Should discount logic have tests?
4. Should inventory logic have tests?
5. Should admin forms have tests?
6. Should Playwright end-to-end tests be included?
7. Should tests cover product browsing?
8. Should tests cover add to cart?
9. Should tests cover checkout?
10. Should tests cover admin login?

11. Should tests cover order status update?
12. Should tests cover mobile viewport?
13. Should seed test data be included?

3.16. Error Handling and Failure Cases

1. What happens if database request fails?
2. What happens if image upload fails?
3. What happens if product image is missing?
4. What happens if checkout request fails?
5. What happens if email provider fails?
6. What happens if payment succeeds but order creation fails?
7. What happens if order creation succeeds but payment fails?
8. What happens if stock changes during checkout?
9. What happens if admin deletes product in someone's cart?
10. What happens if customer refreshes during checkout?
11. What happens if checkout is submitted twice?
12. What happens if discount code becomes invalid?
13. What happens if delivery fee changes?
14. What happens if Supabase Storage is unavailable?
15. Should failures be logged?
16. Should users see friendly error messages?
17. Should admin see technical error details?
18. Should retry buttons be available?

3.17. Deployment

1. Should deployment target be Vercel?
2. Should Supabase project setup be documented?
3. Should environment variables be documented?
4. Should a `.env.example` file be included?

5. Should build command be documented?
6. Should database migration command be documented?
7. Should seed command be documented?
8. Should production deployment checklist be included?
9. Should domain setup be documented?
10. Should HTTPS be automatic through Vercel?
11. Should preview deployments be used?
12. Should staging and production environments be separate?
13. Should Supabase development and production projects be separate?

3.18. Monitoring and Maintenance

1. Should analytics be installed?
2. Should error monitoring be installed?
3. Should Vercel Analytics be used?
4. Should Sentry be used?
5. Should database backups be planned?
6. Should admin audit logs exist?
7. Should order export be available for backup?
8. Should uptime monitoring be used?
9. Should performance monitoring be used?
10. Should logs be visible to developer?
11. Should failed emails be retryable?
12. Should failed orders be recoverable?

4. Core Answers to Collect First

Before writing the final Codex prompt, collect these answers first:

1. Store name and brand style.
2. Product types and categories.
3. Countries and cities where the store will sell.
4. Languages and currencies.
5. Payment method for V1.
6. Delivery method.
7. Admin features needed.
8. Whether users need accounts or guest checkout only.
9. Preferred tech stack, or permission for the developer to choose.
10. Launch deadline and number of products at launch.

5. Recommended V1 Scope

5.1. Frontend

- Home page
- Product listing page
- Product details page
- Cart
- Guest checkout
- Order success page
- Mobile-first responsive UI
- Search, filter, and sort
- Size and color variants

5.2. Admin

- Admin login
- Add, edit, and delete products
- Upload images
- Manage categories
- Manage inventory
- View orders
- Update order status

5.3. Backend and Database

- Supabase Auth
- Supabase PostgreSQL
- Supabase Storage
- Secure RLS policies
- Server-side checkout validation
- Orders and order items
- Product variants with stock

5.4. Notifications

- Customer order confirmation email
- Admin new order email or Telegram alert

5.5. Payments

- V1: cash on delivery or manual confirmation
- V2: card payment integration

5.6. Recommended Tech Stack

- Next.js
- TypeScript
- Tailwind CSS
- shadcn/ui
- Supabase
- Zod
- React Hook Form
- Zustand
- Resend
- Vercel

6. Final Warning

Do not build the project before these questions are answered. A clothing website without clear decisions about product variants, stock, checkout, delivery, admin permissions, and failure cases will become a fragile toy project.

A serious store needs clear business rules first, then architecture, then implementation.
